

CMP2003 3d Modelling - Assessment 1, Component 1

Learning Outcomes	Assessment Criteria	Fail	3	2.2	2.1	1
plan a 3D sequence	Discuss and present the use of appropriate 3d modelling, texturing and lighting techniques to be employed in the project.	Inability to explain and discuss techniques to be employed in the production of a 3d building. There is very little evidence of understanding.	Basic explanation of techniques to be employed in the production of a 3d building. The interpretation is at a basic level and there are substantial areas for improvement.	A structured explanation of the modelling techniques to be employed in the construction of a 3d building. The interpretation could be improved in a number of areas.	A very well structured explanation of the modelling techniques to be employed in the construction of a 3d building. The interpretation is strong but there are some areas of weakness.	A dynamic presentation and exploration of the techniques to be employed in the construction of a 3d building. The interpretation is very strong and contains very few flaws.
