

Character Brief for Content Creation and Management module

Presentation/Part 1

Hand in date: Thursday 20th November 2008-11-08

Requirements:

As part of the log for this brief, the presentation will show 'two' sets of diagrams, both showing a clear outline of the character to be modelled in front, side and back views.

The first set will present the way the edge loops or mesh will be cut, concentrating on areas of major deformation, e.g. the shoulders, knees, buttocks, mouth etc.

The second set of diagrams will indicate how the rig will look inside the character.

An enlarged set of drawings of detailed areas like hands and face can be separate diagrams.

A brief written description of these tasks and your understanding of them will be required.

The value of the marks of this presentation will be up to 10% of the total score of the character brief.

Hand-ins must be on that date and no later.

Formats: PDF, Powerpoint, on CD or in stapled paper format.
